Professional Summary

Full Stack Engineer with 3+ years of experience building scalable web applications end-to-end using React, Next.js, Spring Boot, and Node.js. Proven ability to design high-performance frontend systems and robust backend APIs, handling 2K+ requests/day and processing large-scale data workflows. Experienced in delivering production-ready solutions across healthcare and retail domains.

Professional Skills

Language: Java, JavaScript, TypeScript

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Backend: Spring Boot, Node.js, REST APIs, Microservices

Databases: MySQL, MongoDB

Cloud & DevOps: AWS, Docker, Jenkins, GitHub Actions, Maven, CI/CD

Testing & Practices: JUnit, Agile (Scrum), Code Reviews, System Design, Debugging, Performance Optimization

Relevant Experience

Full Stack Consultant (Freelance)

May 2024 – Present

- Built and scaled full stack e-commerce and admin dashboard systems for 1K+ users, delivering seamless user experiences and efficient backend operations.
- Designed responsive frontend interfaces using React and optimized rendering performance, reducing unnecessary re-renders by 20% and improving UI responsiveness.
- Engineered high-performance REST APIs (Spring Boot, Node.js) handling 2K+ requests/day and processing 10K+ records.
- Implemented asynchronous processing using Redis, improving system throughput and reducing load time for data-heavy operations.
- Owned end-to-end system architecture including frontend, backend, and deployment pipelines (CI/CD), reducing release time from hours to minutes.

Junior Software Engineer,

Sep 2022 – May 2024

Cognizant Technology Solutions – Pune, Maharashtra

- Designed and developed backend services using Spring Boot microservices architecture for retail, handling high-volume data processing (~10K+ records per cycle).
- Contributed to frontend-backend integration for enterprise applications, ensuring efficient data flow and optimized UI rendering.
- Improved user experience by implementing responsive design and optimizing UI performance across devices and browsers.
- Improved reliability by maintaining 90%+ unit test coverage using JUnit, reducing production defects by 25%.
- Automated CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment time by 40% and improving release consistency.

Selected Projects

JobPulse — AI-Driven Job Discovery Platform

- Built a full stack job discovery platform using React, Node.js, and Redis, processing 1K–2K job listings daily.
- Designed scalable backend pipelines for data ingestion and ranking using asynchronous processing.
- Enhanced user experience by building intuitive job search and filtering UI, improving engagement and usability.
- Integrated AI-based job analysis to improve relevance and user decision-making.

Task Management System

- Designed and developed a scalable task management system used by teams for project collaboration, task assignment, and bug tracking.
- Built secure and high-performance REST APIs with JWT authentication and role-based access for multi-user workflows.
- Implemented NLP-based parsing to extract structured task data, reducing manual input effort by 30% and improving team productivity.

Education

Pranveer Singh Institute of Technology

Aug 2018 – Jul 2022

- Bachelor of Technology in Computer Science
