

Shreyam Kanaujiya

Frontend Engineer | React • JavaScript • UI Performance

Kanpur, Uttar Pradesh | 6392764845 | shreyam91183@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Frontend engineer with 3+ years of experience owning and shipping user-facing features using React, TypeScript, and modern JavaScript. Known for building fast, reliable, and secure UI flows where performance, usability, and edge-case handling matter. Comfortable working closely with product, design, and backend teams to deliver production-ready experiences used at scale.

Technical Skills

Frontend: React.js, TypeScript, JavaScript, React Hooks, Context API, Redux, HTML5, Tailwind CSS

UI & Performance: Responsive Design, Lazy Loading, Code Splitting, Render Optimization

APIs & Backend (Supporting): REST APIs, Spring Boot, Node.js, JWT Authentication

Tools: Git, GitHub Actions, Docker, AWS (EC2, S3)

Practices: Agile (Scrum), Code Reviews, Unit Testing, CI/CD

Professional Experience

Freelance Full Stack Developer (Remote)—Jun 2024 – Present

- **Owned frontend delivery** for multiple client features, from requirement discussion to production release, using React and TypeScript.
- Built a **reusable component system** that reduced frontend code duplication by **30%** and improved UI consistency across screens.
- Integrated REST APIs and optimized data handling to improve **UI responsiveness by 25%**, including handling slow and partial API responses gracefully.
- Designed UI flows with **security and misuse scenarios in mind**, ensuring sensitive actions remained protected without hurting user experience.

Junior Software Engineer | Cognizant, Pune (MH) — Sep 2022 – May 2024

- **UI Optimization:** Engineered high-performance interfaces using lazy loading and code splitting, reducing page load times by **40%** and improving core web vitals.
- **Feature Delivery:** Translated low-level design (LLD) specifications into production-grade Java/Spring Boot code, ensuring 100% alignment with functional requirements (FSDs).
- **Agile Collaboration:** Delivered features within an Agile Release Train, actively contributing to all Sprint ceremonies and collaborating with onshore partners to meet global delivery timelines.
- **Quality Engineering:** Sustained **90%+** code coverage by authoring unit tests (JUnit) and conducting peer code reviews, reducing production defects and resolving critical system issues.

Full Stack Developer Intern | Cognizant (Remote)—Feb 2022 – Aug 2022

- **Healthcare Domain Development:** Developed a healthcare claims application using Spring Boot and React, implementing clean API designs that improved claim processing efficiency by **40%**.
- **Performance Optimization:** Reduced overall system latency by **50%** by minimizing React re-renders and optimizing complex SQL queries, significantly enhancing the end-user experience.
- **DevOps & CI/CD Integration:** Streamlined deployment workflows by assisting in the automation of CI/CD pipelines via GitHub Actions and Jenkins, reducing manual deployment errors.

- **Cross-Functional Support:** Provided technical support for UI and API integration, resolving **20+** blocking issues and ensuring the timely delivery of sprint milestones.

Key Projects

Task Management System

- Designed and built a React-based task management platform with a strong focus on usability, state consistency, and performance.
- Implemented **JWT authentication** and **RBAC**, ensuring secure handling of user actions and preventing unauthorized access.
- Handled edge cases such as stale data, partial failures, and role-based UI restrictions to maintain trust and correctness in the interface.
- Improved API response handling and frontend caching, reducing perceived latency by **25%**.

E-Commerce Store ([HerbalIMG](#))

- **Dual-Interface Development:** Built a customer storefront and admin dashboard using **15+** reusable React components, reducing frontend development time by **30%**.
- **Secure Backend Architecture:** Worked on **20+** Node/Express APIs with **JWT/RBAC**, ensuring **100%** secure data isolation between admin and customer roles.
- **Inventory Automation:** Developed a real-time sync engine using MongoDB to track **5000+ SKUs**, cutting manual administrative overhead by **25%**.

Education

Bachelor of Technology (B.Tech.) – Computer Science

Pranveer Singh Institute of Technology, Kanpur | 2018—2022

Certifications

- React—Basic to Advanced (Hooks & State)
- Java Programming (Advanced OOP & Collections)
